

Design Improvement Summary.

Problem Identified:

During first-time user feedback, users felt confused due to the smart animation used in the onboarding flow. It was visually appealing but made the app feel less natural when swiping.

Solution:

Replaced the smart animation with a simple slide transition to match user expectations and improve flow clarity.

Result:

The new transition felt smoother and more intuitive. It enhanced usability without distracting the user. This change was based directly on real feedback and makes the app more user-friendly.

Screens Affected:

- Onboarding 1 → 2
- Onboarding 2 → 3
- Onboarding 3 → 4
